

# **Civil Engineering**

## **Model Question Papers**

### **For Undergraduate Program**

The model question papers are suggestive blueprints. The primary aim of these question papers is to bring clarity about the process of connecting questions to performance indicators and hence to course outcomes. Further, these question papers demonstrate how bloom's taxonomy can be used to understand the quality of question papers and their effectiveness in assessing higher order abilities. The structure of question papers, number of questions, choices given, time given for examination etc., can vary based on the practices of the University or college.

# Table of Contents

<b>Name of Course</b>	<b>Page No.</b>
1. Advanced Geotechnical Engineering	CE1-CE3
2. Construction Project Management	CE4-CE6
3. Advanced Project Management	CE7-CE9
4. Design of RCC Structures	CE10-CE11
5. Environmental Engineering	CE12-CE14

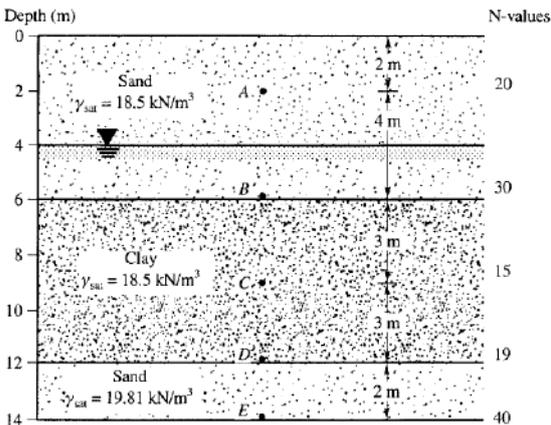

## Course Name: Advanced Geotechnical Engineering

### Course Outcomes (CO):

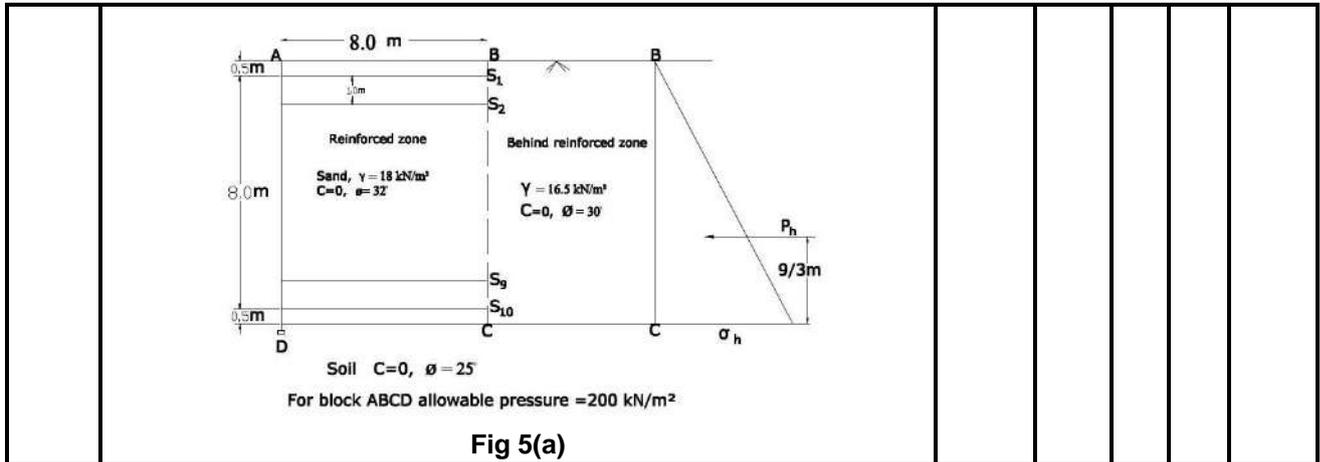

At the end of the course the student should be able to:

1. Plan soil exploration program, interpret the results and prepare soil exploration report.
2. Compute active and passive earth pressure.
3. Carry out stability analysis of finite and infinite slopes with some field problem.
4. Compute safe bearing capacity of shallow foundations.
5. Design pile and pile group.
6. Carry out settlement analysis of footings.
7. Assess the potential of soil for the design of landfills and reinforced earth wall.

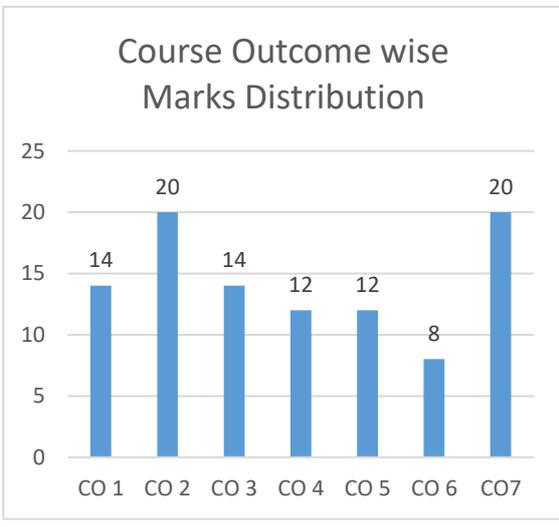

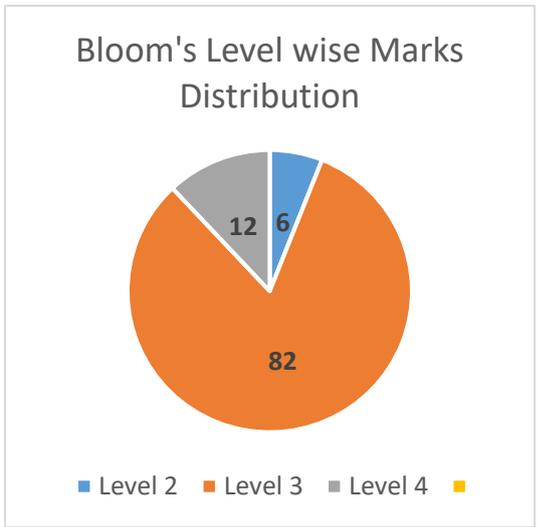

**Model Question Paper**  
**Total Duration (H:M):3:00**  
**Course :Advanced Geotechnical Engineering**  
**Maximum Marks :100**

Q.No.	Questions	Marks	CO	BL	PO	PI Code
1a	You are appointed as site engineer and have been tasked to carry out site investigations for an earth dam construction site. Describe the investigation procedure and discuss what information is required for the preparation and presentation of the report.	8	CO1	L3	1	1.3.1
1b	A standard penetration test was carried out at a site. The soil profile is given in figure 1(b) below with the penetration values. The average soil data are given for each layer. Compute the corrected values of N and plot showing the variation of observed and corrected values with depth.   <p style="text-align: center;"><b>Fig 1(b)</b></p>	6	CO1	L3	4	1.3.1
1c	The unit weight of a soil of a 30° slope is 17.5kN/m <sup>3</sup> . The shear parameters c and φ for the soil are 10 kN/m <sup>2</sup> and 20° respectively. Given that the height of the slope is 12 m and the stability number obtained from the charts for the given slope and angle of internal friction is 0.025, compute the factor of safety.	6	CO3	L2	1	1.3.1
2a	For the retaining wall shown in figure 2(a), draw the active earth pressure distribution diagram and obtain total active force on the wall.	8	CO2	L3	2	2.1.2

	<b>Fig 2(a)</b>					
2b	A retaining wall 4.5 m high with a vertical back supports a horizontal fill weighing $18.60 \text{ kN/m}^3$ and having $\phi = 32^\circ$ , $\delta = 20^\circ$ , and $c = 0$ . Determine the total active thrust on the wall by Culmann's graphical method.	12	CO2	L3	1	1.3.1
3a	A canal having side slope 1:1 is proposed to be constructed in cohesive soils to a depth of 4.5m below the ground surface. The soil properties are a given below; $\phi_u=15^\circ$ , $c_u=10\text{kN/m}^2$ . $e=1.0$ $G=2.65$ . find the factor of safety with respect to cohesion against failure of bank slopes; i) When the canal is full of water and. ii) When there is sudden draw down of water in canal.	8	CO3	L3	2	2.1.2
3b	Determine the depth at which a circular footing 2m diameter be founded to provide a factor of safety of 3.0. If it has to carry a safe load of 1500 kN. The foundation soil has $c=15 \text{ kN/m}^2$ , $\phi=30^\circ$ and unit weight of soil $\gamma=18\text{kN/m}^3$ .	7	CO4	L3	2	2.1.2
3c	A large scale bearing capacity test on a footing of size $1.05\text{m} \times 1.05\text{m}$ at a depth of 1.5m yielded an ultimate value of 141 kN. Unconfined compressive tests on the soft saturated clay yielded a strength of $0.03 \text{ N/mm}^2$ . If the unit weight of the soil is $16 \text{ kN/m}^3$ , how much does the test value differ from that obtained using Terzaghi's bearing capacity equation?	5	CO4	L3	2	2.1.2
4a	Design a pile foundation system in 20 m thick soft clay with undrained cohesion of $60\text{kPa}$ , density of $18\text{kN/m}^3$ and water content of 30%. The clay layer is underlain by hard rock. The pile foundation should carry a load of 6500 kN. Take liquid limit=60%, $G=2.7$ .	12	CO5	L3	2	2.2.3
4b	A soil profile at a site consists of 4.0m of medium sand with dry unit weight of $17 \text{ kN/m}^3$ , underlain by a normally consolidated layer of 2.0m thick clay. The initial void ratio of clay is 1.0 its saturated unit weight is $20 \text{ kN/m}^3$ and its liquid limit is 50%. The ground water table is at the top of the clay layer. A square footing $2\text{m} \times 2\text{m}$ is founded at a depth of 1.0 m below the GL at the site. The load on the footing is 1200 kN. Calculate the settlement of footing due to consolidation of the clay layer.	8	CO6	L3	2	2.1.2
5a	Check the reinforced earth wall shown in figure 5(a) for stability against a) sliding b) over turning and c) bearing failure. Although BC is a rough face, assume it to be smooth.	8	CO7	L3	2	2.1.2

5b	<p>Site A and Site B are two sites located at a distance 20km and 30km respectively from a city. Below table gives the details for both sites.</p> <p>i) What criterions to be considered while selecting a landfill site?</p> <p>ii) Compare the score of both sites and suggest which site is best suited for constructing a landfill.</p>	12	CO7	L4	2	2.1.2

**PO – Program Outcomes; PI Code – Performance Indicator Code**

# Course Name: Construction Project Management

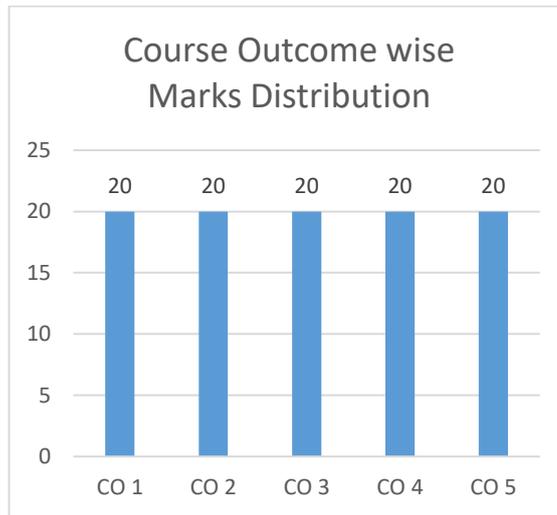

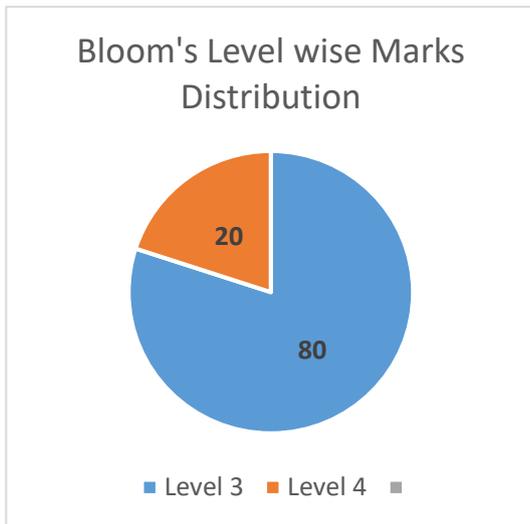

## Course Outcomes (CO):

1. Determine the inter-relationships of construction drawings and specifications and their working in construction engineering and management.
2. Develop Work Breakdown Structure (WBS) for various types of buildings.
3. Construct a construction project schedule by combining the WBS, duration and networking methods.
4. Develop a safety protocol for various construction projects depending on the site conditions in alignment with SP 70 2001 manual.
5. Analyse the various site conditions on a construction project and select construction equipment best suited for those conditions.

**Model Question Paper**  
**Total Duration (H:M): 3:00**  
**Course: Construction Project Management**  
**Maximum Marks :100**

## Course Name: Advanced Project Management

### Course Outcomes (CO):

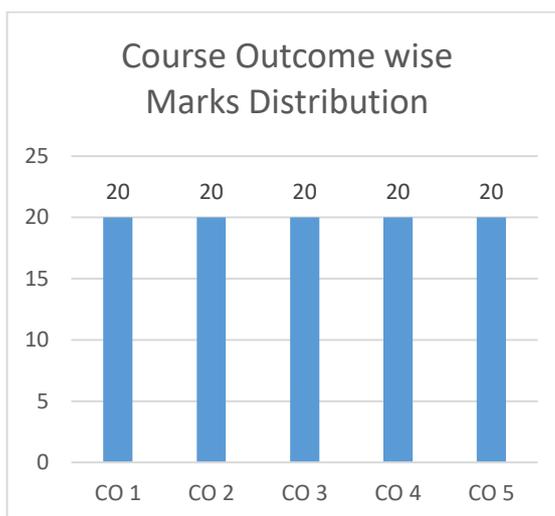

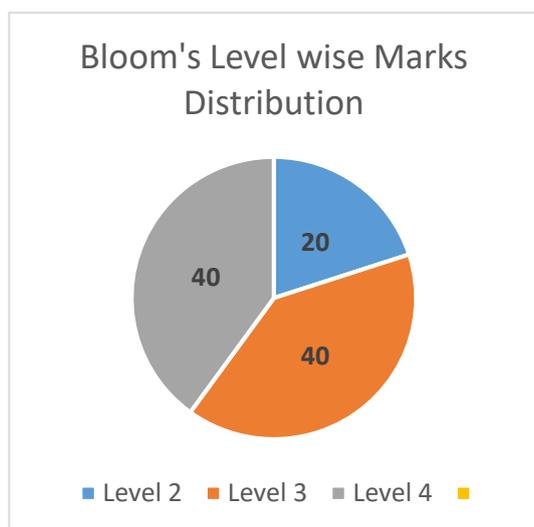

1. Assess the importance of monitoring and control phase during the execution of a construction project.
2. Combine estimating and scheduling and develop a cost loaded schedule which will combine both cost and time aspects into one cost loaded schedule.
3. Develop earned value reports to know the progress of the project at any instant of the project duration.
4. Evaluate the various bidding strategies employed in construction.
5. Conduct risk analysis to determine the probable risks involved and place appropriate mitigation measures in place.

**Model Question Paper**

## Course Name: Design of RCC Structures

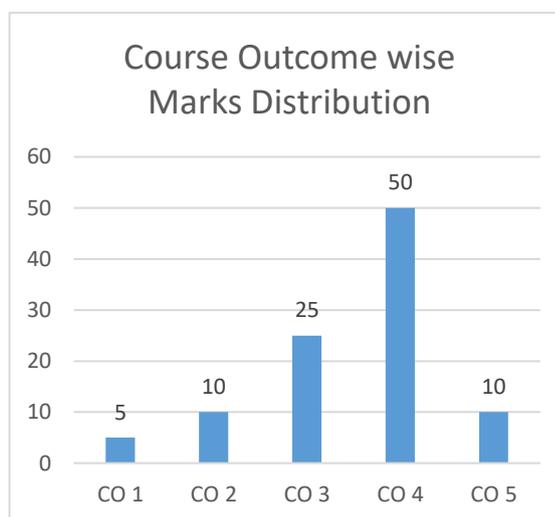

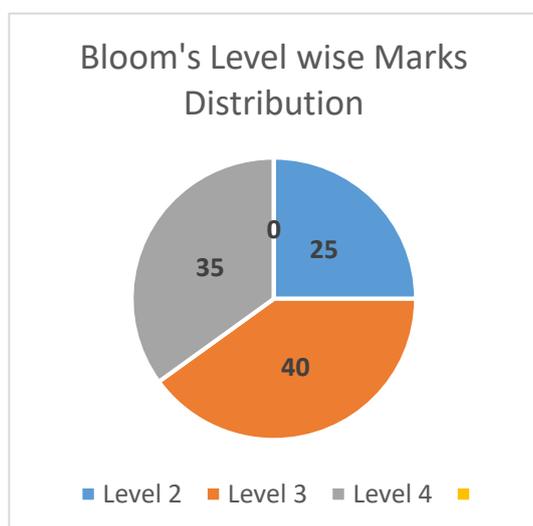

### Course Outcomes (CO):

1. Assess different design philosophies of R.C.C. structure and relative merits and demerits.
2. Analyze the structure for different methods under limit state design philosophy.
3. Estimate the moment carrying capacity and serviceability criteria of various structural elements.
4. Design the reinforced concrete sections such as beams, slabs, columns, footings and staircase.
5. Detail the bar bending scheme of the RCC structural elements.

**Model Question Paper**  
**Total Duration (H:M):3:00**  
**Course: Design of RCC Structures**  
**Maximum Marks :100**

Q.No	Questions	Marks	CO	BL	PI
1(a)	What are the different limit states of design? What are the merits of limit state design over other philosophies?	10	2	L2	1.3.1
1(b)	A RC beam 200mm wide and 500mm deep is reinforced with 3nos of 16mm dia bars. Find moment of resistance of beam. Effective span is 5m. If effective cover is 40mm find safe working load as well as super imposed load. Use M25 grade concrete and Fe500 grade steel.	10	3	L3	1.3.1
2(a)	Derive the stress block parameters for compressive force $C_u$ and Tensile force $T_u$ using limit state method of design.	5	1	L2	1.3.1
2(b)	A singly reinforced rectangular section of breadth 200mm and effective depth 400mm is made up of concrete of M20 grade and steel of Fe500 grade. Find out following <ol style="list-style-type: none"> <li>1. Calculate maximum moment of resistance that a given section can offer and also what is corresponding area of steel.</li> <li>2. Find moment of resistance and area of steel if depth of N.A. is restricted to <math>0.3d</math>.</li> <li>3. If c/s is reinforced with 4% of c/s size of beam find <math>X_u</math> for steel to fail and also moment of resistance at that instance.</li> <li>4. Check whether given c/s can withstand an ultimate B.M. of 100kNm. If not suggest alternate solution.</li> </ol>	15	3	L4	1.3.1
3	A Room is having clear dimensions of 3m x 6m. The superimposed live load on slab is $10 \text{ kN/m}^2$ , at service state. The slab is simply supported on all the four sides on a wall of 300mm thickness. The corners are held down. Decide whether the slab is designed as one way slab or two way	20	4	L3	2.3.1

Q.No	Questions	Marks	CO	BL	PI
	slab giving proper justifications. Design the slab using M-20 grade of concrete and Fe-415 grade of steel. Sketch the reinforcement details.				
4	A rectangular beam of effective span 6m needs to be designed. The superimposed load on the beam is 50kN/m. The c/s size of the beam is restricted to 300mmX600mm by the architect. List out different types of beams that can be provided under these circumstances. Design the beam which gives you optimal solution.	20	4	L4	2.3.1
5(a)	State and explain the basic assumptions made for design of columns under axial compression and uniaxial bending.	10	4	L2	1.3.1
5(b)	Design a rectangular R.C. footing for an R.C. column 230 mm x 450 mm carrying an axial load of 1500 kN. The S.B.C. of the soil is 150 kN/m <sup>2</sup> . Sketch the reinforcement details.	10	5	L3	2.3.1

Q.No	Questions	Marks	CO	BL	PI														
1(a)	<p>Predict the population of the city in the year 2040 and also estimate the design demands of the water supply scheme. The census report is as follows:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th>Census Year</th> <th>Population</th> </tr> </thead> <tbody> <tr> <td>1960</td> <td>31500</td> </tr> <tr> <td>1970</td> <td>37800</td> </tr> <tr> <td>1980</td> <td>51700</td> </tr> <tr> <td>1990</td> <td>57400</td> </tr> <tr> <td>2000</td> <td>59200</td> </tr> <tr> <td>2010</td> <td>67500</td> </tr> </tbody> </table> <p>Assume that the city is rapidly advancing.</p>	Census Year	Population	1960	31500	1970	37800	1980	51700	1990	57400	2000	59200	2010	67500	10	CO2	L3	1.1.1
Census Year	Population																		
1960	31500																		
1970	37800																		
1980	51700																		
1990	57400																		
2000	59200																		
2010	67500																		
1(b)	Discuss the impact of human activities on environment	06	CO1	L2	7.1.1														

Q.No	Questions	Marks	CO	BL	PI										
1 (c)	Discuss the criteria for selection of an indicator organisms	04	CO4	L2	1.2.1										
2 (a)	<p>For the water supply of a small town, water is required to be pumped from a tube well to an overhead tank. Work out the capacity of the pump. The data are given as below.</p> <table border="0" style="width: 100%;"> <tr> <td>Daily demand of water</td> <td style="text-align: right;">750 m<sup>3</sup></td> </tr> <tr> <td>Hours of pumping</td> <td style="text-align: right;">8</td> </tr> <tr> <td>Water table below ground level</td> <td style="text-align: right;">8 m</td> </tr> <tr> <td>Height of the tank above ground level</td> <td style="text-align: right;">14 m</td> </tr> <tr> <td>Loss of head in the pump and rising main</td> <td style="text-align: right;">1.75 m</td> </tr> </table>	Daily demand of water	750 m <sup>3</sup>	Hours of pumping	8	Water table below ground level	8 m	Height of the tank above ground level	14 m	Loss of head in the pump and rising main	1.75 m	10	CO3	L3	1.3.1
Daily demand of water	750 m <sup>3</sup>														
Hours of pumping	8														
Water table below ground level	8 m														
Height of the tank above ground level	14 m														
Loss of head in the pump and rising main	1.75 m														
2 (b)	Enumerate the impurities in ground water which should be taken into account in deciding the potability of a sample. State the effects when they exceed the prescribed BIS limits.	10	CO4	L2	1.2.1										
3 (a)	Design Clari-flocculation units to treat 15 MLD of water.	12	CO4	L3	2.1.2										
3(b)	<p>For the water supply of a small rural town with daily requirements of 225 m<sup>3</sup> of water, it is proposed to construct a distribution reservoir. The pattern of draw off is as follows</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 50%;">7am--8 am</td> <td style="width: 50%;">30% of day's supply</td> </tr> <tr> <td>8 am---5 pm</td> <td>35% of day's supply</td> </tr> <tr> <td>5 pm –6.30pm</td> <td>30% of day's supply</td> </tr> <tr> <td>6.30pm ---7</td> <td>05% of day's supply</td> </tr> </table> <p>The pumping is done at a constant rate of 8 hours/day (8am- 4 pm). Determine the total capacity of service reservoir .The population of the town is 50,000.</p>	7am--8 am	30% of day's supply	8 am---5 pm	35% of day's supply	5 pm –6.30pm	30% of day's supply	6.30pm ---7	05% of day's supply	08	CO5	L3	1.3.1		
7am--8 am	30% of day's supply														
8 am---5 pm	35% of day's supply														
5 pm –6.30pm	30% of day's supply														
6.30pm ---7	05% of day's supply														
4(a)	Design a combined outfall sewer running 70 % full at maximum flow of sewage for a city having catchment area of 200 hectare, rainfall intensity 20 mm/hr all of which is runoff. Projected population of the city is 4 lakh. Water to the city is supplied from the water works at a rate of 250 lpcd. The sewer is to be laid at a slope of 1 in 450. Take N= 0.013.	8	CO6	L4	2.1.2										
4(b)	The following observation was made on a 3% dilution of sewage.	6	CO7	L3											

Q.No	Questions	Marks	CO	BL	PI
	DO of aerated water for dilution 3 mg/l DO of diluted sample after 5 day incubation 0.8 mg/l DO of original sample 0.6 mg/l Calculate BOD, Ultimate BOD and 3 days BOD at 37 ° C. Take $k = 0.23/d$				1.1.1
4( c)	Explain the working of a grit chamber with a neat sketch	6	CO7	L2	1.3.1
5(a)	Design ASP to treat settled sewage of 10 MLD having a BOD of 180 mg/l ,it is desired to produce a filter effluent having a BOD 20 mg/l	12	CO8	L4	2.1.2
5(b)	A city discharges 1500l/s of sewage into a stream whose minimum rate of flow is 6000l/s. The 5 day BOD for sewage is 200 mg/l and that of river is 1 mg/l .The DO content of stream is 90 % of the saturation DO. If the minimum DO to be maintained in the stream is 4.5 mg/l, determine the degree of sewage treatment required. Assume $K_D = 0.1/day$ and $K_R = 0.3/day$ .	8	CO9	L3	1.3.1
